New website shows full and detailed information across our product ranges such as industrial heat-tracing cables, heating jackets and leak detection sensing cable system. Specially it contains brand-new products, which were developed in 2014 and 2015 for saving industrial facilities and people from the risk of explosion and fire. Also it is kindly designed for clients to download globally recognised Ex certificates such as ATEX, IECEx and KCs with ease.

The visitor can easily search and read our monthly newsletter as well as download product specification and product manual for on-site installation and commissioning.

To enhance our global marketing and to provide investor information on-time, Solco Pyroelec opened English website first. The new Korean website can be disclosed in April 2016 for local client companies and investors.
